BRAND INTRODUCTION

Smarter Design Meets Better Storage.

At STORIQ™, we believe better storage starts with smarter design.
Design that installs faster, lasts longer, and adapts to real living needs.

The STORIQ™ Closet System is created to balance intelligent system thinking, premium construction, and practical installation — delivering storage solutions that work in real projects, not just on paper.

WHAT IS THE STORIQ™ CLOSET SYSTEM?

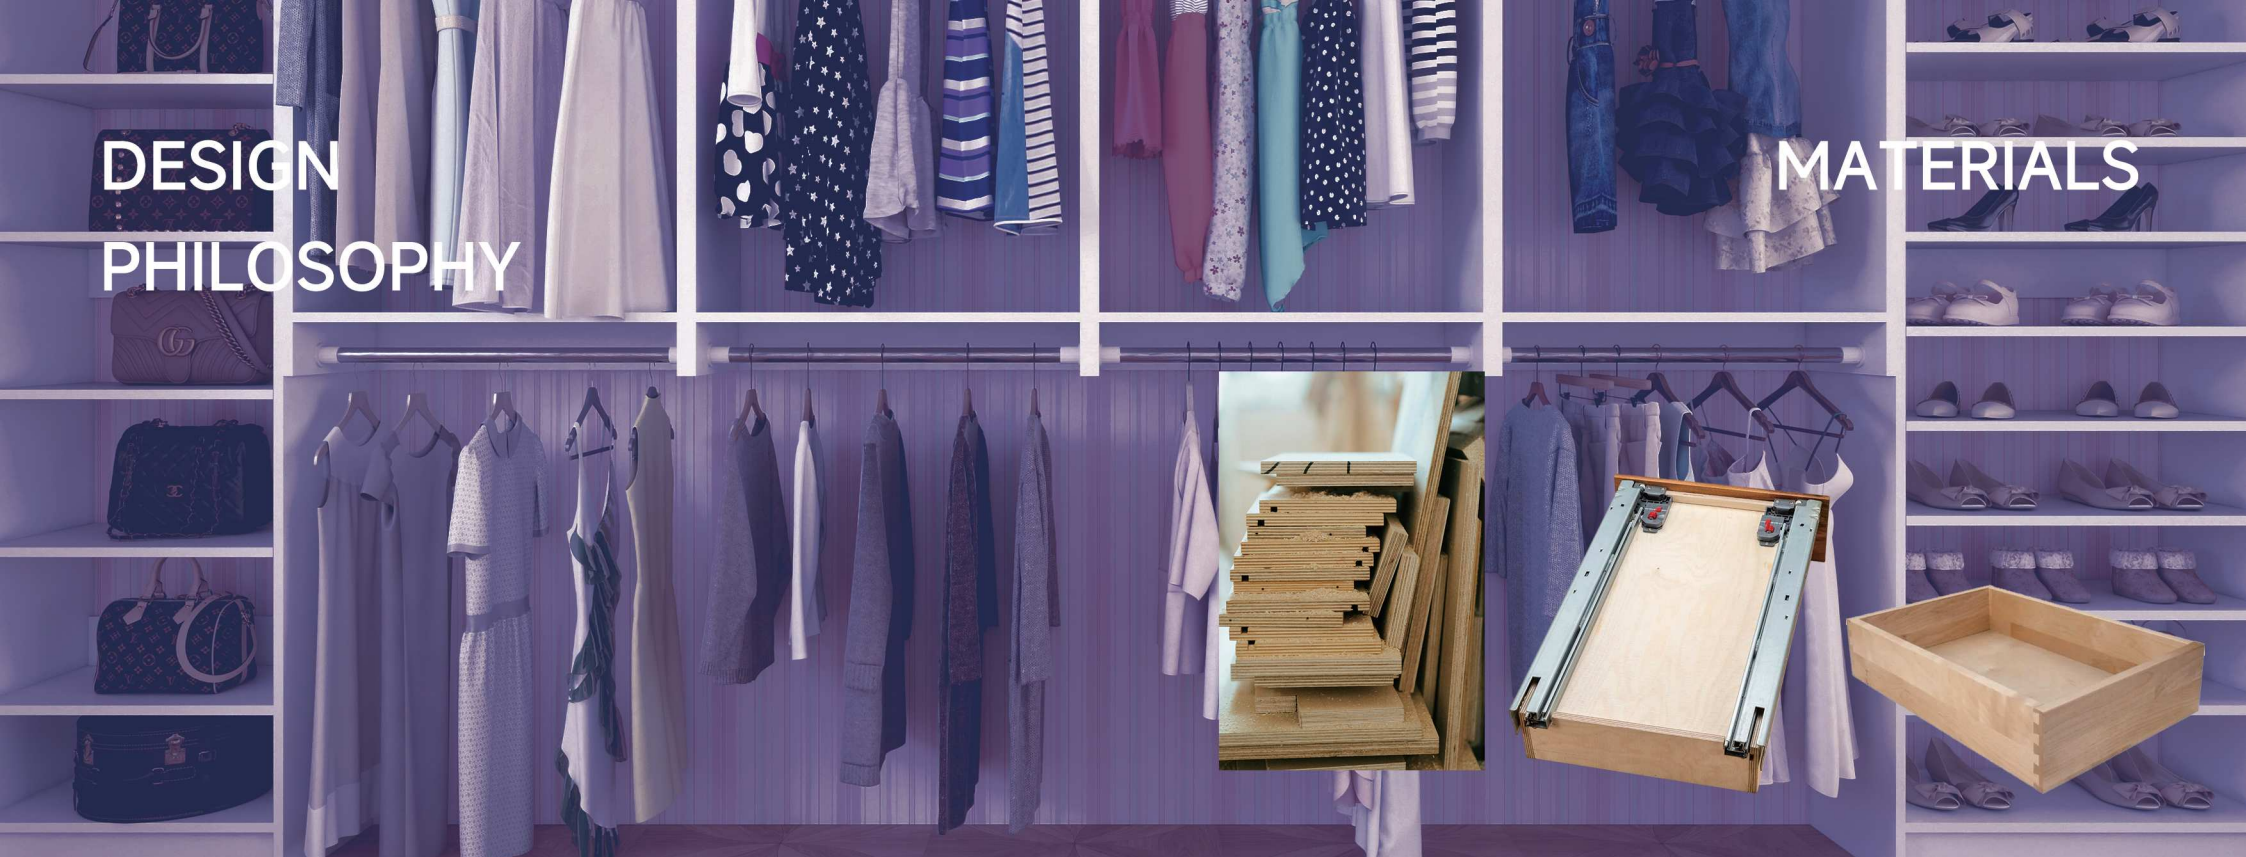

The STORIQ™ Closet System is a smart, modular storage solution designed to adapt to different spaces, functions, and budgets.

Built on a flexible modular framework, STORIQ™ works equally well in small closets and large walk-in spaces. At its core, the QuickLok™ fast-locking assembly system speeds up installation for professionals while remaining easy for DIY users to install with confidence.

Combined with carefully selected materials and refined craftsmanship, STORIQ™ delivers reliable performance, clean design, and long-term durability in real-world use.

DESIGN PHILOSOPHY

MATERIALS

Smarter Design, Built as a System

The STORIQ™ Closet System is designed around a clear modular philosophy.

Instead of treating a closet as a single, fixed structure, we break storage down into functional modules—hanging sections, drawer units, shoe storage, and shelving—each engineered as an independent, compatible component.

This modular approach allows the system to adapt easily to different room sizes, layout constraints, budget levels, and functional needs.

By combining modules thoughtfully, STORIQ™ delivers flexible configurations without sacrificing consistency, structure, or long-term reliability.

Built Better from the Inside Out

STORIQ™ standard products are built with plywood construction, solid wood drawer boxes, and undermount soft-close drawer slides, paired with UV coating and painted finishes—a premium specification that exceeds typical industry standards.

These material and finishing choices ensure long-term durability, structural stability, and consistent quality in everyday use.

For project-based orders, STORIQ™ also offers a wide range of material options, allowing you to meet project requirements while optimizing cost and budget flexibility.

ASSEMBLY & INSTALLATION

Designed to Install Faster

01

Faster Assembly, Less Effort

The QuickLok™ system uses specially designed locking hardware that eliminates the need for bolt alignment during assembly, unlike traditional cam-lock structures.

Components are aligned and secured with a simple press or tap, allowing panels to lock firmly into place with minimal effort

02

Precision Pre-Drilled Connections

All connection points are precisely pre-drilled during manufacturing, ensuring accurate alignment and consistent assembly. This not only improves structural stability but also significantly reduces on-site installation time and potential errors.

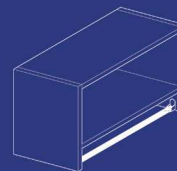

FLEXIBILITY & SYSTEM GROWTH

Standardized, Yet Adaptable

01

Modular by Function

The STORIQ™ Closet System is designed by breaking storage into clearly defined functional modules. Hanging sections, drawer units, shoe storage, and shelving are each developed as independent modular components, engineered to work seamlessly within one unified system.

02

Flexible by Space, Budget, and Use

This modular approach allows STORIQ™ to adapt easily to different room sizes, budget ranges, and functional requirements. By combining the right modules, the system delivers tailored solutions without unnecessary complexity—ensuring efficiency, consistency, and practical flexibility for every project.

DESIGNED TO SIMPLIFY YOUR INVENTORY

Fewer SKUs. More solutions.

The STORIQ™ Closet System is designed around a clear modular philosophy.

Instead of treating a closet as a single, fixed structure, we break storage down into functional modules—hanging sections, drawer units, shoe storage, and shelving—each engineered as an independent, compatible component.

This modular approach allows the system to adapt easily to different room sizes, layout constraints, budget levels, and functional needs. By combining modules thoughtfully, STORIQ™ delivers flexible configurations without sacrificing consistency, structure, or long-term reliability.

DESIGNED FOR PROJECTS

Project & Builder Friendly

For project-based customers, STORIQ™ offers professional design and high-quality rendering services, delivering realistic visuals in 4K / 8K resolution to support presentations and approvals.

The system supports multiple material options, helping meet project requirements while optimizing overall costs. Most importantly, the QuickLok™ fast-locking assembly system significantly reduces installation time, keeping projects efficient and on schedule.
